

SDP GitHub Branching Workflow

main/master :

- Code that can be or has been deployed into production.
- Working version of application.
- hosted

develop:

- Branched from main.
- Actively being worked on.
- When version is tested and approved, then merge with main.

feature:

- Branched from develop.
- Different features of the application in development. (eg. login, sign up, payment, etc).
- Contains many features across different branches.
- Different people work of each branch.
- When feature is tested and pull request is accepted, then merge with feature/develop.
- Delete Feature branch when completed.
